

Y11-12 Graphic Transition - Task 5

Typography development

Choose your most successful/favourite typography design from the last task, develop & refine it.

Try developing it by either changing the scale of the features, add or combine it with another shape, try adding or removing serifs, alter the kerning (distance between letters), simplify your design, make it more complex, add other features such as drop shadows or 3D... or anything else you wish. Produce a final design.

If you have access to Adobe Illustrator (or Photoshop or ProCreate if you prefer) use to trace around your design if you can.
